## Safety Precautions

*For your safety, do not attempt to use the HomeSet Mobile App in any other way than described. While the Mobile App will function as you move about, depending upon the performance of your home network and wireless service, the Mobile App performance may be affected. If you have questions as a homeowner/system user, please contact the professional installer/programmer who installed your HomeSet system.*

# Mobile App Quick Reference Guide

## Introduction

The HomeSet® Mobile App for Android™ and iOS devices works with the HomeSet C100 Control Hub for easy, handheld control and automation of electronic components in your home (audio/video and home entertainment devices such as lights, thermostats, security systems and more) to make life more enjoyable. This app is installed as part of a HomeSet system by your smart home professional.

This Mobile App does not use “line of sight” control. This means you can move freely about, both inside your home and while away, to control most any smart home function.

If your system also includes the HomeSet R100 Remote Control, this HomeSet Android and iOS Mobile App provides similar control from your mobile devices, including “two-way” feedback on your smart devices, such as what music is playing, volume and more. For additional information about the function names and other usage, you can refer to the HomeSet R100 Owner’s Manual available at [www.HomeSetHome.com](http://www.HomeSetHome.com).

This Quick Reference Guide describes some of the primary features of your HomeSet Mobile App.

# Mobile App Getting Started

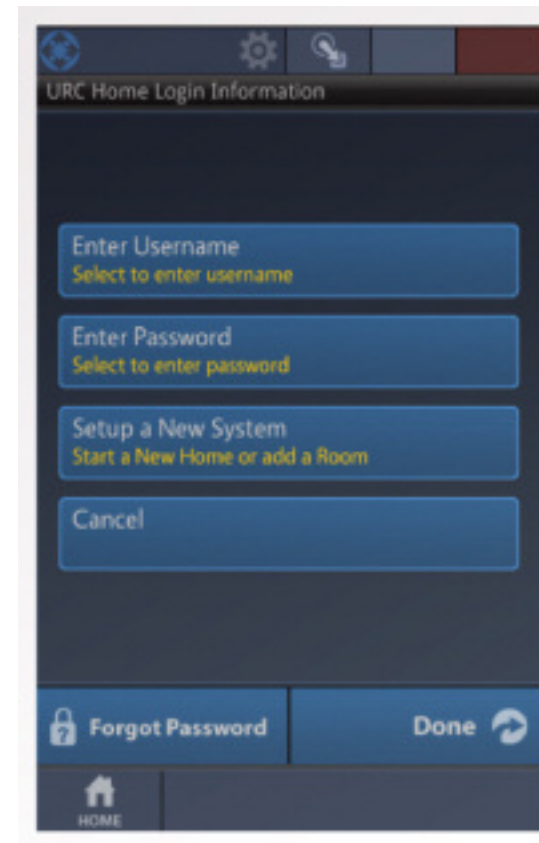

## Notice

*Some of the following sections contain information that is useful to the professional installer/programmer who will install and setup your system. It's not necessary for you to learn the details. However, we recommend you read them to be aware of functions and capabilities of your HomeSet system. While the app works for both phones and tablets, screen images shown are of the app on a phone.*

## Using the HomeSet Mobile App for the First Time

When launching the HomeSet Mobile Application for the first time, your mobile device needs to be connected to the same local Ethernet network that your HomeSet C100 Hub is connected to. Your professional installer/programmer will typically have set this up for you during the initial setup of the HomeSet system. You cannot be connected to a mobile broadband network for first time discovery and connection to your system. After the first time connection over the local network, you'll then be free to use local Wi-Fi or Mobile Broadband to control your HomeSet system.

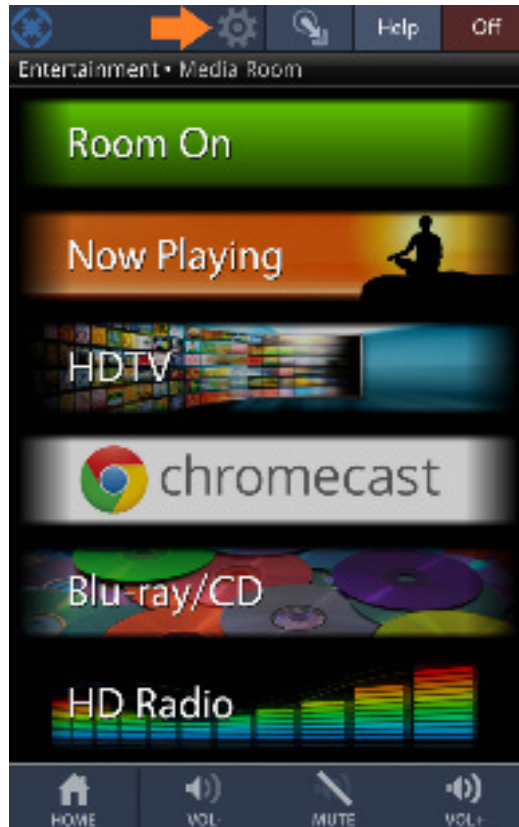

You'll be prompted to enter your username and password. This is the same username and password used to access the HomeSet Programming Portal, which is the portal your professional installer/programmer will use to program your HomeSet system. If you are a professional installer implementing a HomeSet system for the first time, select "Setup a new system" as shown in the screen to the right.

# Mobile App Settings & Installing

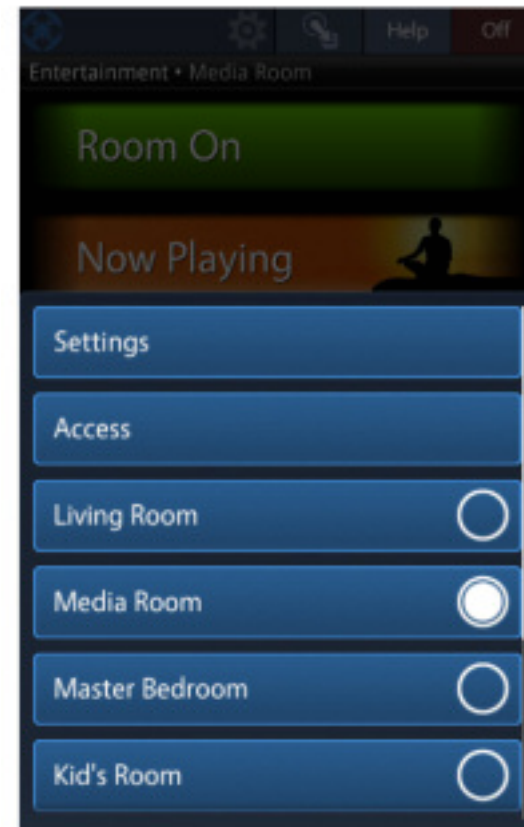

## Application Settings

Selecting the Settings icon (“sprocket”) at the top of the mobile screen reveals HomeSet Mobile App (Mobile App) custom settings.

## Selecting a Room to Control

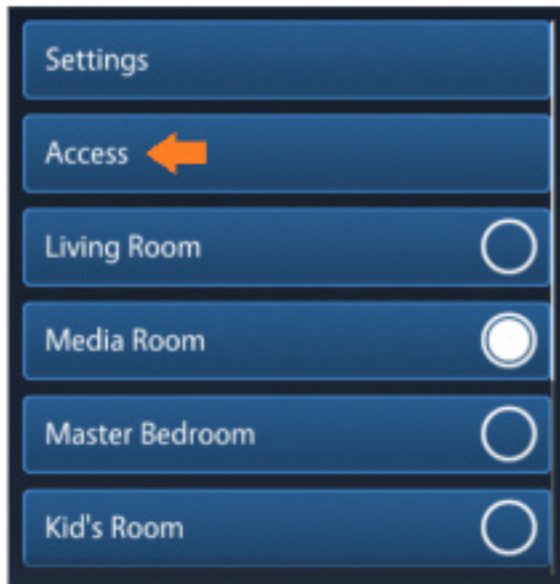

If your HomeSet system is setup to control multiple rooms in your home, pressing the Settings icon reveals a list of rooms available for control in your home. Selecting a room results in the Mobile App displaying the sources or products that are available for control.

# Mobile App Settings & Installing

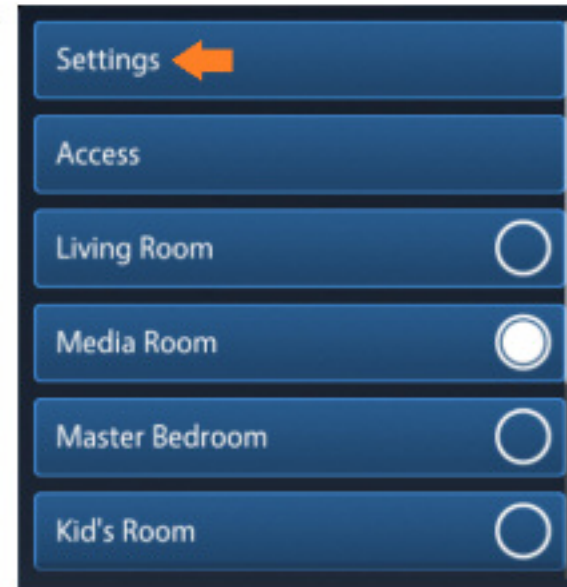

## Access

Select "Access" to switch the Mobile App between local Wi-Fi control and Mobile Broadband control of your system (if supported by your mobile device).

## Settings

Select "Settings" to fine tune settings of the Mobile App. The screens on mobile devices differ for iOS and Android.

# Mobile App Settings & Installing

The following “Settings” options are available:

## **Always On**

Turning on “Always On” results in the screen of your mobile device staying on while the Mobile App is displayed.

## **Factory Default**

Selecting “Factory Default” results in resetting of the Mobile App. You will have to enter your username and password again to reconnect to your HomeSet system.

## **Control Hub/Base Station Setup**

Use this option if you are replacing or changing settings of a HomeSet accessory within your home.

## **Start a New Home**

This provides the option to add more homes to your HomeSet account. This is for when you add a second, or vacation home.

NOTE: Please consult your installer/programmer before starting a new home.

## **Home Location**

If multiple homes are setup for control in your HomeSet account, use this option to select the home you’re controlling.

## **Version**

If contacting HomeSet technical support, have the version number of your Mobile App handy. **NOTE:** *Please have your installer/programmer call tech support, as detailed system information may be requested.*

## **Remember Password**

Use this option if you prefer to not enter a HomeSet system password each time you use the Mobile App.

## **Set Button Press Sound**

Set this option “On” to hear audible feedback each time a button is pressed within the Mobile App.

## **Set Vibration Feedback**

Set this option “On” to feel vibration feedback each time a button is pressed within the Mobile App. This option works only if your mobile device supports vibration feedback.

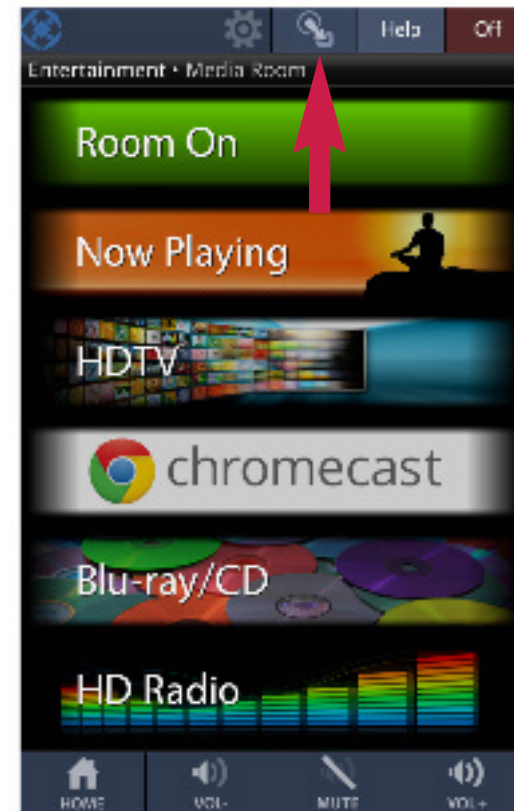

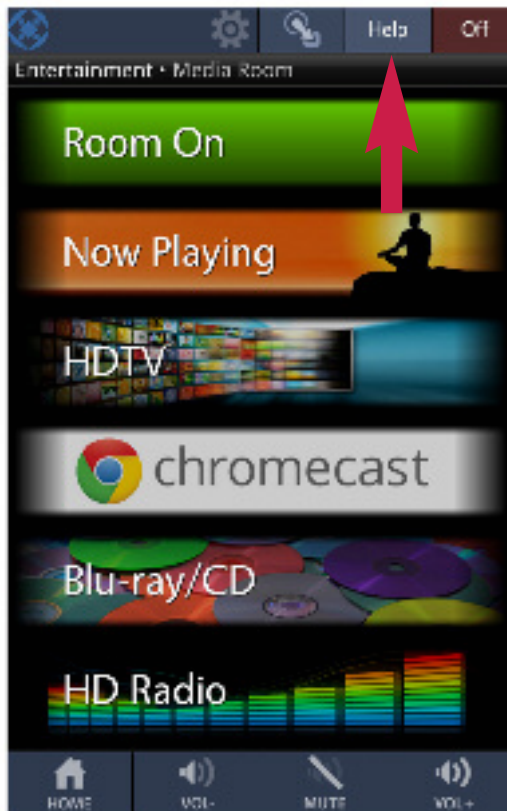

# Mobile App Settings & Installing

## Your Room's Main Control Screen

Use this screen to select the product or source and control the volume in your room. Use the OFF button to turn off devices in the room. Pressing HELP at any time provides assistance when controlling the room.

## Using HomeSet's In-App Launcher

Selecting the App Launcher button displays a ribbon or scrolling bar that allows embedding of other manufacturers' mobile apps within the HomeSet Mobile App. Press and hold an empty area on the HomeSet In-App Launcher to add another manufacturer's mobile app to HomeSet Mobile App.

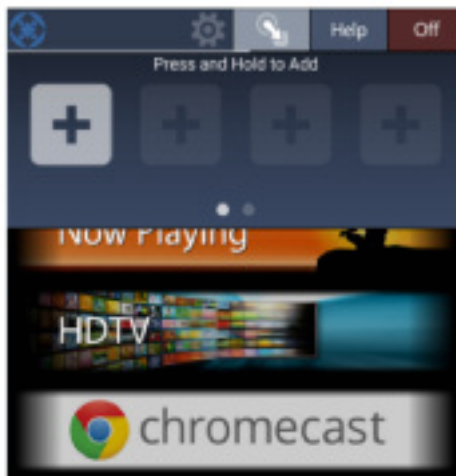

# Mobile App Settings & Installing

## Add Applications

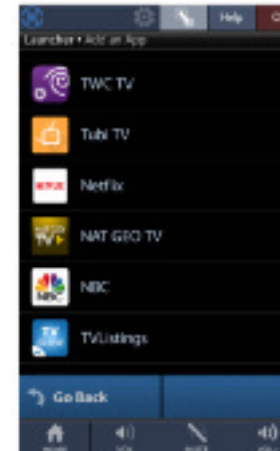

Virtually any app on your mobile device can be incorporated into the HomeSet Mobile In-App Launcher. For example, if you have a security app to control your security alarm panel already, that native app can be added to the top of the HomeSet Mobile App. The security app experience is maintained, ever-present, and is always the most up-to-date provided by that manufacturer.

Simply select other applications to add to the HomeSet Mobile In-App Launcher. You can also add apps for other entertainment and smart home products.

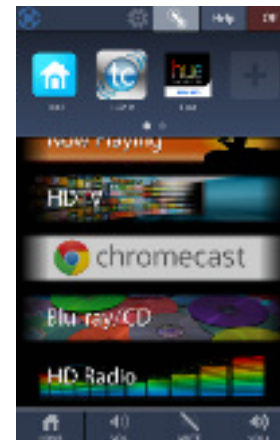

## Remove Applications

Once an app is added to the HomeSet App Launcher, the app can be removed by pressing and holding the app for five seconds.

Selecting an app from the HomeSet In-App Launcher opens the manufacturer's mobile app for that device. Selecting the Back button on your mobile device returns you to the HomeSet Mobile App.

# Mobile App Additional Information

## Specifications

- **Device Compatibility:** Compatible with Apple's iPad®, iPhone®, iPod touch® and related mobile devices, and with Android smart phones and tablets.
- **Version Compatibility:** Works on Apple iOS 6.0 and higher and Android 4.0 and higher.
- **Download Method:** Downloadable from Apple iTunes™ and Google Play™ Stores.

## Updating

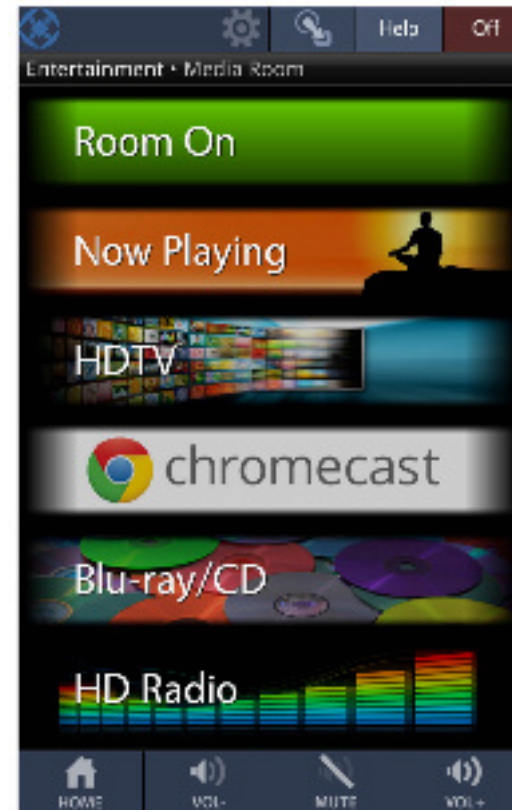

It is recommended you visit your app provider store frequently to ensure that you keep your HomeSet Mobile App up to date. Use the latest version of the Mobile App that's available to ensure your system is up-to-date with the latest firmware and advancements.

**NOTE:** You may want to consult with your system installer/programmer before downloading the latest version of the Mobile App in the Google Play or Apple App stores.

HomeSet system features and hardware may be updated from time to time. Manual HomeSet software and/or hardware updates should only be performed by your authorized HomeSet installer /programmer. Features may vary between customized software and URC software releases. To find out more, please contact your custom installation professional with questions. All information, features, benefits and user screens are subject to change without notice.

## End User Agreement

Terms and conditions of the End User Agreement available at [www.UniversalRemote.com/end-user-agreement/](http://www.UniversalRemote.com/end-user-agreement/) apply.
